sorting screws

Product overview

- The screw sorter is a 3d printed device that helps speed up the process of sorting screws. There is a slot in the screw sorter where a screw can be placed. On the side, there are markings with different measurements. By putting the screw in its slot, the user can look to see how long the screw is.

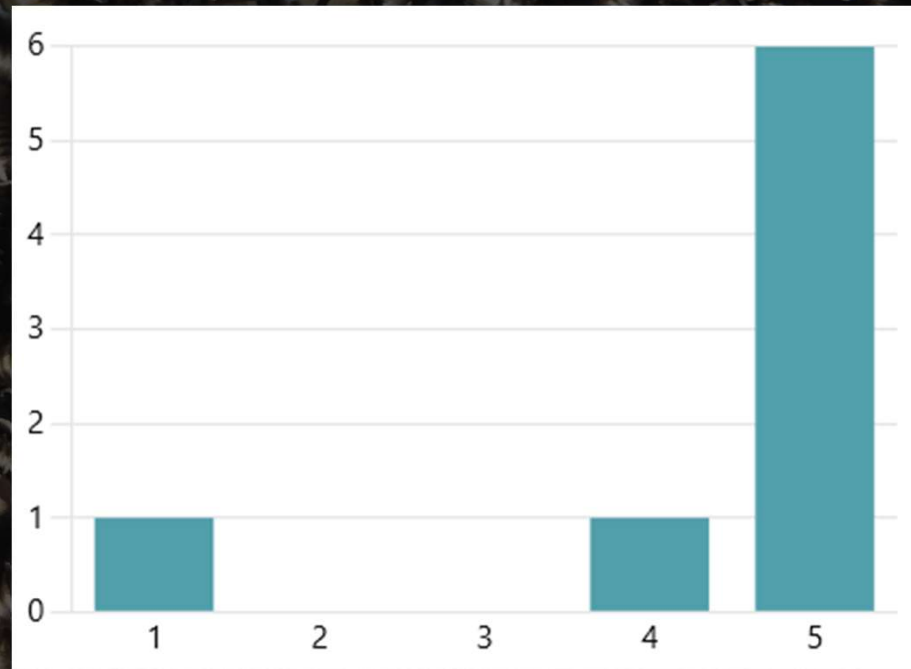

Product feedback

1. How confident would you be using this product to sort screws?

4.38

Average Rating

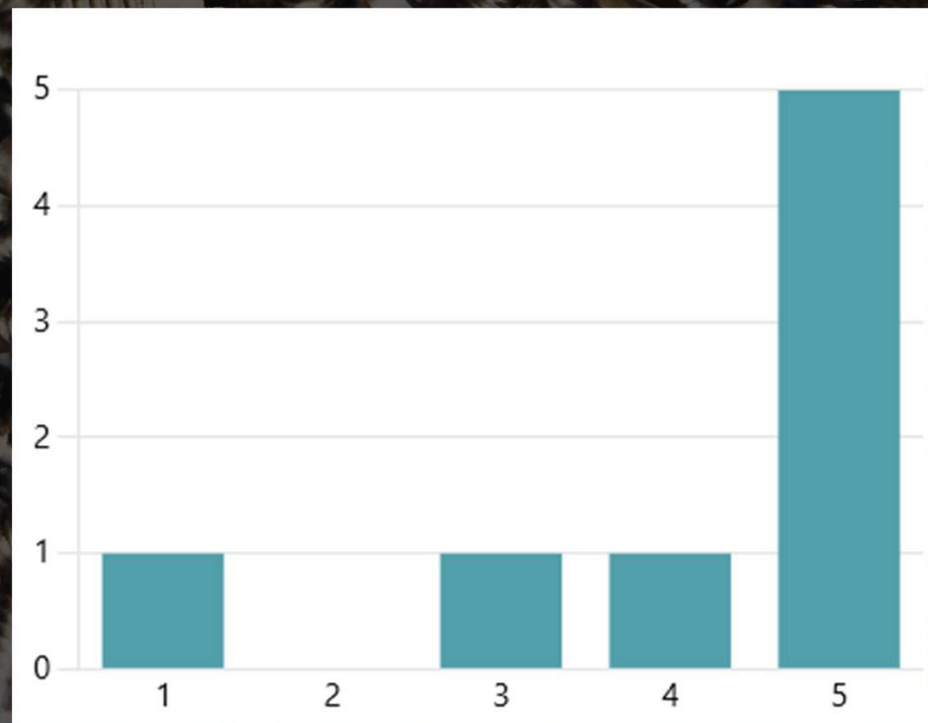

Product feedback

2. Do you think this product would be easily produced and distributed to many people?

4.13

Average Rating

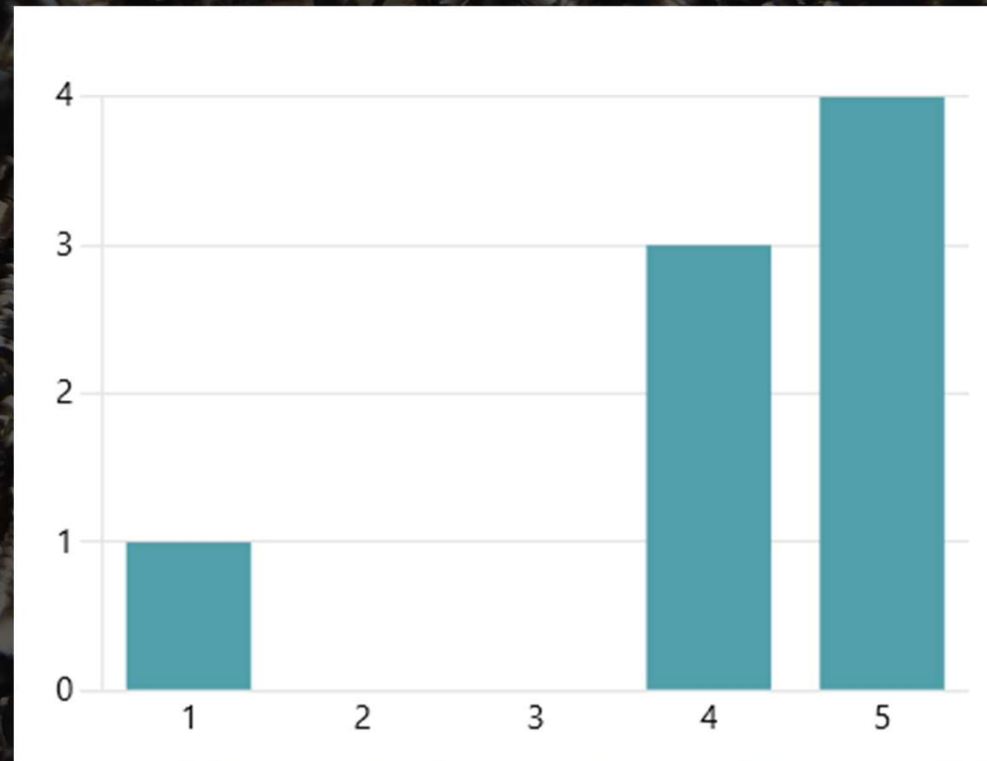

Product feedback

3. How effective do you think this product would be in increasing efficiency in screw sorting?

4.13

Average Rating

Product feedback

- People asked for it to look cooler
- Possibly be used for different screw types
- Use nasalization

Next Steps

- We will redesign and make the original print more legible, we would also like to delete the small part at the top that holds the cap of the screw, so it sits flush with the top edge and the threads are the only part in the product
